SUMMARY

I'm an Information Technology graduate specializing in Game Development with a strong foundation in software engineering, systems integration, and cloud-based application development. I have hands-on experience building interactive games, backend systems, and scalable solutions using technologies such as Java, Spring Boot, Spring Security, React, JavaScript, MySQL, Python, TypeScript, AWS, RabbitMQ, and Unity. My background includes RESTful API design, database integration (JPA/JDBC), test-driven development with JUnit and Mockito, and working in Agile environments. I'm a collaborative problem-solver who enjoys turning complex requirements into clean, efficient, and production-ready software while continuously expanding my technical skill set.

PROFESSIONAL EXPERIENCE

Software Engineer Mar 2026 - Present

Dev 10

- Selected for Dev10's highly competitive paid training program (acceptance rate under 5%), completing an intensive 12-week Java Cloud full-stack development curriculum.
- Leveraged Java, Spring Boot, & Spring Security to design scalable applications within an Agile environment, employing test-driven development with JUnit & Mockito for enhanced code quality
- Completed the program and was placed with a top-tier client organization, contributing to enterprise-level software development initiatives and production-quality applications.

Project Manager/Developer Sep 2025 - Dec 2025

Navitend Newark, NJ

- Orchestrated development of a TypeScript game with a team of 4 students, utilizing Node.js within an agile workflow to create 3 engaging levels
- Optimized development environments for a small team utilizing GitHub, enhancing collaborative workflows & streamlining version control processes
- Enhanced project collaboration by organizing meetings via Discord, fostering teamwork & driving engagement among team members

Web Dev Instructor Jun 2025 - Aug 2025

Arrayscape Gaming Linden, NJ

- Taught HTML, CSS, JavaScript, and frontend logic, mentoring students on software problem-solving and debugging.
- Deployed web projects to hosted environments and guided students through version control workflows with Git.
- Strengthened communication and customer-service orientation through one-on-one instruction and technical troubleshooting.

PROJECTS

Rank Forge - Full-Stack Web Application - Role: Full-Stack Developer

- Developed Rank Forge, a full-stack game ranking and community platform that allows users to create accounts, search for games, build Top 10 rankings, and interact with other users through comments and ratings.
- Designed and implemented secure user authentication and authorization using JWT, while building RESTful APIs and full CRUD functionality with Java, Spring Boot, MySQL, and JDBC.
- Integrated an external video game API to populate and maintain game data, implemented automated CRON-based updates, and enhanced user experience with React, React Router, search pagination, leaderboard rankings, and responsive UI design.

Systems Integration Project - Role: DMZ Creation

The project involved integrating a third-party data source with a custom front end through a multiple-server environment which was run through multiple virtual machines. I was responsible for the creation of the DMZ and connecting an API to the virtual machine that was running the database.

- Helped with other sections of the project like frontend, backend, and database.
- Developed PHP-based sections optimizing database queries to enhance overall system performance
- Integrated the backend using RabbitMQ, enhancing system reliability with demonstrated expertise in RabbitMQ implementation

KEY SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL/MySQL, Bash, PowerShell, C++, C#, PHP, HTML, CSS
Cloud & Systems: AWS, Linux (Ubuntu), Windows Server, Multi-VM Configuration, Networking, System Administration
Tools & Frameworks: Spring Boot, Spring Framework, Spring Security, React, React Router, React Paginate, JDBC, JPA, Git, GitHub, Maven, IntelliJ IDEA, RabbitMQ, Trello, Phaser (JavaScript Engine), Unity, Unreal Engine
Practices: REST API Development, JWT Authentication, Agile/Scrum, CI/CD Fundamentals, Software Deployment, Scripting Automation, API Integration, Test-Driven Development (JUnit, Mockito), Testing & Documentation, Troubleshooting, CRON Scheduling

EDUCATION

Bachelor of Science in Information Technology Specialization in Game Development	Jan 2023 - Dec 2025
New Jersey Institute of Technology	Newark,NJ
Associates of Science in Computer Science Specialization in Programming	Sep 2020 - Dec 2022
Raritan Valley Community College	Branchburg,NJ
